

aleo

Enjoy your solar  
powered life

# Improving lives. One solar panel at a time.

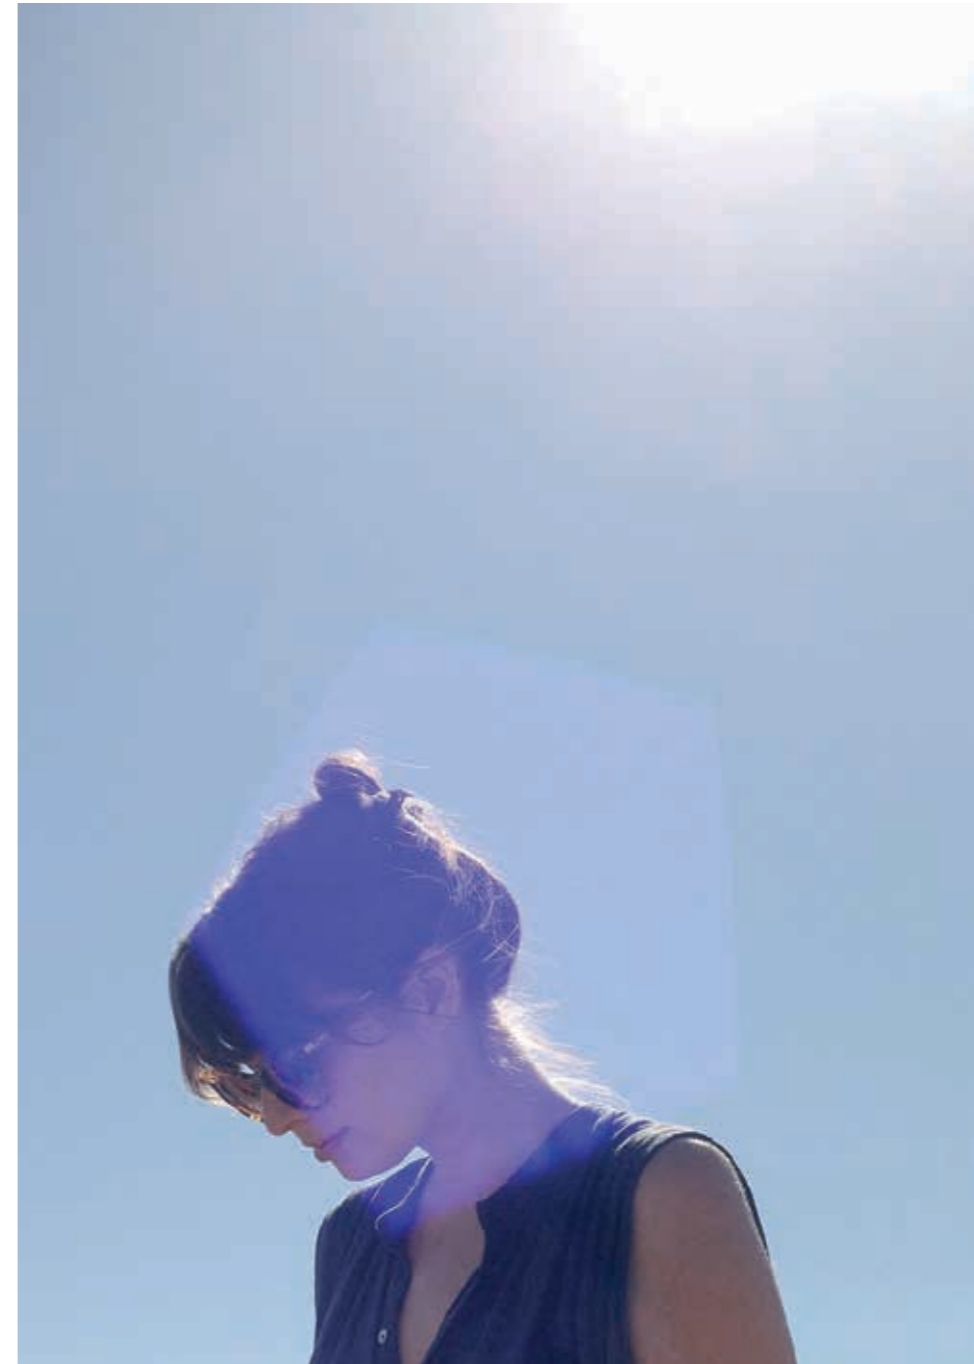

We are on a mission: we want to build trust. We want to live sustainably. We want to fight climate change. We want to start today and we want to show you how you can be part of the solution.

Join us in a journey to change the world.

# Adopt the solar lifestyle.

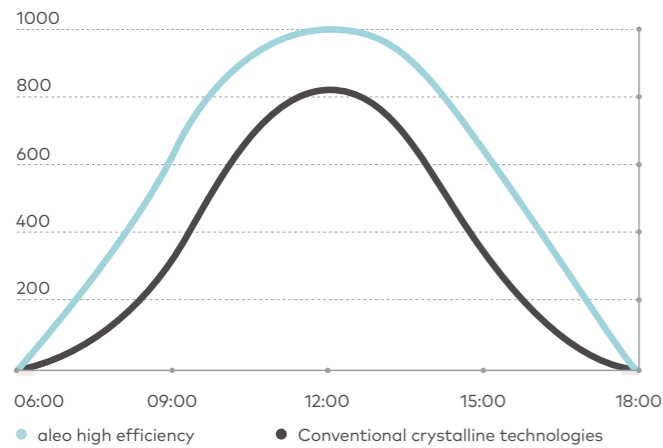

What if you could produce your own electricity? What if you could lock-in your electricity rates?

Today, solar energy changes everything. You take control of your electricity bills, make savings and contribute to fight climate change. At aleo, with our premium solar panels and support, we help you join the solar community easily. Then you just have to relax and enjoy your solar powered life.

# Our technology puts more solar electricity in your life.

With solar energy slated to play an ever increasing role in satisfying your energy needs, you should bet on the product that provides the best energy output. After all, what's the point of installing products whose poor performances would reduce the interest of your investment? We have developed a high efficiency technology that significantly outperforms conventional technologies for you to get the maximum electricity and returns from your solar system.

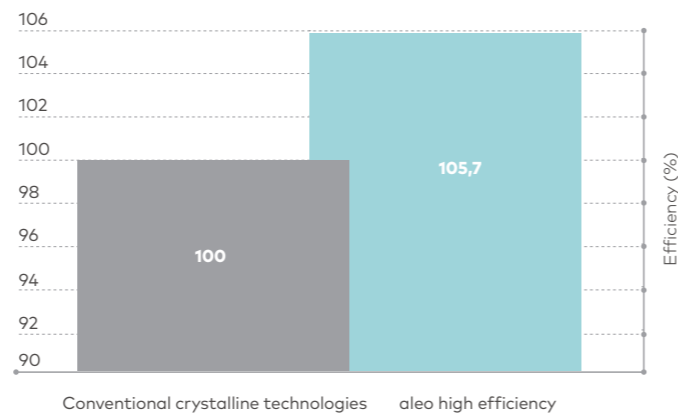

## BETTER PERFORMANCES

The technology features better energy production in real world conditions over conventional technologies.

## WHEN THEORY MEETS FACTS

A one year field study led at Politecnico di Milano has confirmed that aleo's high efficiency technology significantly outperforms conventional technologies and provides you with more solar electricity.

## HIGH EFFICIENCY SOLAR CELLS

Our solar modules are equipped with the best-in class solar cells manufactured by our mother company.

## EFFECTIVE ARCHITECTURE

We tightly selected and assembled highly performing components.

## PATENTED CELL INTERCONNECTION

We use cell connectors that increase incident light capture and increase output.

# A culture geared towards excellence.

Beyond the processes, the commitment of each employee relentlessly looking for perfection makes the difference. This our culture. This our know-how. Since our inception, our commitment proved consistent and have convinced thousands of customers that quality matters.

When you consider what is at stake with a solar power system supposed to perform for at least two decades, .the question is whether the small savings you realize when investing into cheap solutions really worth it. After all these years of careful observation of the market, we can say it quite confidently: it does not.

**MADE IN GERMANY**

**RAW MATERIAL SELECTION**  
Over the years, aleo has developed its own processes to test and select the components of its modules in order to ensure their long lasting performance.

## **2 x INTERNATIONAL STANDARDS REQUIREMENTS**

We perform tests at least twice as much stringent than required by the international norms to provide our customers with the best performances

## We care. Whatever happens.

Our solar panels are designed to last. Still, we have already planned the unexpected. Our warranties have only one objective: that you can always rely on your solar electricity to power your life.

10 years  
performance guarantee

—  
25 years  
product guarantee

—  
98%  
of nominal power guaranteed the  
first two years on HE Tec series

Full cost  
responsibility  
for module  
replacement

in case of a binding guarantee  
case, also supports the reshipment  
of modules, transport and labour  
costs related to removal and  
installation of modules.

# Solar craftsmanship expertise. Since 2001.

Since our inception, we have turned into a company promoting solar at a global scale, all this with keeping a human size with strong values.

2014 marked a new major step in our history as we joined Sino American Silicon group, a well established worldwide leader in semi conductor and solar technologies.

Founded 35 years ago, the company position itself has a leading innovator in its field. Geared towards future, the group progressively establishes the foundation of a long term leadership in solar technology.
